ADVANCED
TRAUMA
CARE FOR
NURSES

Course Overview

The ATCN Course is taught concurrently with approved Advanced Trauma Life Support® (ATLS) Courses.

Benefits of the ATCN Course include an educational, team building, collaborative, synchronized approach to trauma care as trauma nurses share didactic lectures with the physician attendee of the ATLS® Course. Physicians and nurses caring for trauma patients have the opportunity to share a common language and approach to trauma care. When the ATLS attendees break out for physician skill stations the ATCN nurses join small group trauma nursing skills stations.

These ATCN® skill stations are based on an interactive “hands-on”, scenario-based approach to adult education. The practical testing stations allow the ATCN students to demonstrate the application of ATLS and ATCN information on a moulaged patient. ATCN students are given both the ATLS Student Manual and the ATCN Student Manual.

The ATCN course was developed in response to a need for advanced trauma education for nurses. The ATCN course has been operational for over twenty years and is under the auspices of the Society of Trauma Nurses (STN). STN is a professional, international nursing organization that spans the continuum of trauma care. The STN-ATCN® Program **verifies** successful completion of the ATCN® Course and provides continuing education credit for completion of a course.

ATCN is currently available in over 20 states across the USA, and is also internationally including Denmark, Saudi Arabia, Italy, Hong Kong, Sweden, Puerto Rico, Spain; all offer both student and faculty courses.
